

The fan pattern adjustment adjusts the spray pattern from a straight line to a round circle

Fan Pattern Adjustment

Fluid Adjustment

Note: in this gun the fluid adjustment is the bottom knob; in some guns it may be the top knob. If you are uncertain of which knob is which, note that the fluid knob is always in line with the fluid needle.

The Binks spray gun illustrated above ( Binks HVLP Mach1 SL) is typical of the type of gun that is recommended for spraying semi-permanent mold releases. Please note that other manufacturers can provide similar equipment that is equally suitable for this purpose.
